

Aspose.Email Product Family

- Aspose.Email for .NET combines a number of flexible .NET class libraries and components for working with emails easily and quickly. It supports email management and synchronization, iCalendar features and even Twitter. Aspose.Email for .NET makes it easy to work with email and FTP servers. Save time adding useful features to your application and leave email validation and management to Aspose.Email.
- Aspose.Email for Java is a class library that allows Java applications to read and write Microsoft Outlook documents without using Microsoft Outlook. Use it to manage recipients, subjects, body and attachments in MSG files, and reading contacts, messages and folder information from PST files.
- Aspose.Email for SharePoint is a flexible solution that provides email file format conversion, FTP and email synchronization features within Microsoft SharePoint applications.

The tables below describe the features for each of the platforms in more detail. Get a free trial of Aspose.Email for any platform at www.aspose.com and see for yourself how easy it is to work with.

Aspose.Email is the new name for Aspose.Network for .NET, Java and SharePoint. The new name reflects what our customers really use the product for.

Aspose.Network for .NET still exists as a small utility that offers network programming features removed from Aspose.Email for .NET.

Family Members

All Aspose.Email products work independently and do not need products other than the supported platform to be installed.

Item	Benefit	Supported Platform
Aspose.Email for .NET	Work with common email files in .NET applications using a well-structured Document Object Model. Add advanced email sending and transfer features to your applications with support for popular email and FTP servers. Add social media features with our Twitter API and generate occurrence dates for recurrence patterns in the iCalendar format.	.NET Framework 2.0, 3.0, 3.5, 4.0
Aspose.Email for Java	Work with MSG / PST file formats in Java applications, using a well-structured Document Object Model.	JDK 1.4 through 7.0
Aspose.Email for SharePoint	Work with MSG / EML files from the SharePoint document library in SharePoint applications: convert emails, synchronize files across email servers, and transfer and synchronize files between FTP servers and the document library.	Microsoft SharePoint 2010
